General information

- If the required conditions are not specified, the study shall be carried out with the calculations and design conditions of the standard products, for other design conditions the customer shall provide all necessary information required by Sunfer.
- Requirements for car park installation:
 - o The dimensions of the footings have been obtained for an arbitrary value of land indicated in the technical documentation.
 - o The necessary tests must be carried out to obtain the soil resistance characteristics. These must be obtained by or under the responsibility of the client.
 - o The foundation, depending on the availability and variability of the ground, is subject to change under the supervision of a competent technician.
 - o All assembly instructions and product specifications provided by Sunfer must be observed.
 - o Dismantling of the supports is to be carried out in reverse order to assembly.
